Made from Food Grade BPA free plastic in our factory with a Telarc audited HACCP Food Safety Programme.

Last Drop Bottle™ 500ml with High Quality Trigger

EPI Code LASTDN (Natural/opaque).
Revolutionary bottle that gets that last drop from the bottom, no waste! **Pack size box of 48 or box of 20.** Price includes the trigger. The design of existing products often causes "dry firing" and the re-priming needs repeated squeezing of the trigger. The Last Drop Bottle has been designed to constantly draw from

the liquid, even "the last drop" hence the name. Dry firing isn't appreciated by users' with arthritis in their fingers and wrist, or anybody for that matter. Buy the product that's easier to use.

MOQ 48, if trigger sold separately.

MOQ 48, if bottle sold separately.

This amazing and ingenious design forces the draw tube right to the spot where the last drop of liquid will be. Hence, there is less dry firing, easy on the hands, and less waste of having a bit of liquid left over.

Bottle - 300ml Cream

EPI Code 1092
Pack size 185 or box of 20. Price includes 38mm tamper evident cap. Available in natural (opaque) only. Diameter 65mm. Height 135mm (top of cap). Weight (empty including cap) 26gms. Promotional

NZ's Favourite Promo Company

This is just a small selection of the many hundreds of promotional products that we have. In addition, there are more pens, drink bottles, sports goods, fridge magnets, key rings, golf, umbrellas, stationery, health & beauty, USB drives and much more. Visit our websites to see all our products and give us an email for up to date pricing.

www.epiplastics.co.nz

www.trendscollection.co.nz

We have developed a range of 10 different epoxy resin domed label shapes and sizes that will suit many applications (special sizes and shapes can be supplied). There is a minimum of 250 units per order. They offer a permanent full colour solution for labelling and branding that looks and is superior to conventional vinyl labels. 3D Resin Domed Adhesive Labels are also a great stand alone product used for branding cars, computers and accessories, furniture, household appliances and hundreds of other everyday products. Pricing depends on the size of the dome and numbers run. Please see our website www.epiplastics.co.nz for details. Custom sizes available.

Resin Domes

The EPI Plastics Factory

Nearly everything we sell is made by us in our New Zealand factory. You can trust our products for **quality** and **strength**. We use FDA approved foodgrade plastics and have an audited HACCP Food Safety Programme in place. Our UN DG 20 Litre cube jerrycan is independently certified to carry dangerous goods. We protect NZ's biodiversity by having a Ministry of Primary Industry's approved and audited biosecurity plan and facility for unloading anything we do import. We are involved in recycling, making our range of Eco Buckets. When we consult we aren't just suit wearing pencil pushers, we walk the talk. We come up with ideas, we make the actual products on our machines, warehouse and then market them to a huge variety of customers. We stand by and **GUARANTEE** our products and service.

Custom Moulding

Most of the products that we manufacture we own the tooling, intellectual property, products and distribution. However, we do a large amount of custom moulding, using customer tooling, and help companies make their own products, from design, tool making, production, warehousing and distribution. If you have your own tooling, contact us today and we can get busy. If your product is just an idea, read below for our product development consultation service. Be aware that product development can cost you a large amount of money (\$10s of thousands), but can make you even more!

Navigating Product Development - Thoughts Become Real

Do you have a great idea for a product? Do you dream about what sort of life success with your idea can deliver? We understand, we have lived it, and can help you navigate the dream to successful reality. All products were once a problem, a need. Then came the thought, something ethereal. These thoughts are real, but they are not yet things.

Plastic is a fantastic product. Harnessing these thoughts, with the use of design, moulds and machines, thoughts become reality. But more is required.

We have certain strengths to walk beside you. We have launched our own products, a need was seen and a profitable solution found, we have done this over and over again. We have helped other customers deliver their dream into reality many times. Our customer base of over 3,000 businesses

can become your customer base. We've done the hard yards, we have stumbled and skinned our knees, gone down endless dead ends and cul de sacs – you don't need to reinvent the wheel.

At EPI we have bundled this experience and have it for sale, as navigational skills to get your idea, like a ship, into an unfamiliar port, to unload your cargo and reap the rewards.

Our new products become real because a team working in many countries was brought together. We can do the same for your idea.

Be prepared, product development can be very expensive, often costing many 10s of thousands of dollars. Norman Wood's charge out rate is \$420 per hour.

Norman Wood
Managing Director, EPI Plastics

Our new amazing child resistant cap about to be available on our bottles and jerrycans was once just a spark in the mind, now it is a real object in the hand. What do you have, that is just a spark, that needs to be real, and let's be honest, can make you money! And dream what you can do!

Your lead product development consultant is Norman Wood, the managing director. Educated in New Zealand and London, worked as a management consultant in Wellington. He has been in business since 1986 and specifically manufacturing for 16 years. Many of his innovations and inventions have been very successful dominating the sales of our factory. He can consult on your products too.

Norman Wood, Managing Director

"Easy to Order, Quality Guaranteed, Fast Delivery, No Hassle, Friendly, UN DG Rated 20L Jerrycan, NZ Wide Distribution with great freight rates. HACCP Based Food Safety System"
